

Embedding a 6L EKG for Remote Patient Monitoring Product Demonstration Webinar September 23, 2020 2:00 – 3:00 pm CST

Please join us for a **free** product demonstration webinar for NHA member hospitals. NHA Services Preferred Business Partner MyVitalz™ has integrated an FDA medical-grade 6 lead EKG tech-based solution into their remote patient monitoring platform.

Never has more heart health information been available at your fingertips. Share detailed 6-lead EKGs with physicians for a better view of the patient's heart. Allow patients to help physicians provide them with even better care. In 30-seconds, this medical grade 6-lead EKG can detect atrial fibrillation, bradycardia, tachycardia or normal heart rhythm.

Webinar Objectives:

- Identify the ways that RPM improves patient outcomes and reduces costs.
- Learn how CMS (1135 waivers), and other payors are incentivizing RPM and CCM use.
- See the ease of the implementation process.
