

Back2Work/School COVID-19 Screening Solution Product Demonstration Webinar July 30, 2020 2:00 – 3:00 pm CST

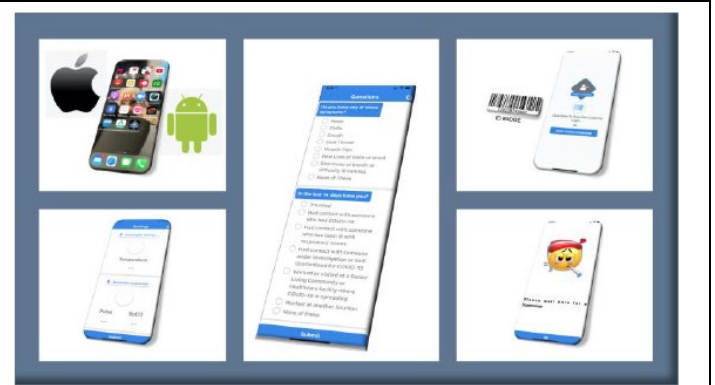

Please join us for a **free** product demonstration webinar for NHA member hospitals. NHA Services Preferred Business Partner MyVitalz™ has designed a Back2Work/School – COVID-19 Screening App/Solution to expedite entry to facilities under the parameters set forth by the Centers for Disease Control and Prevention (CDC).

This COVID-19 employee screening tool is accessed by scanning an employee or student ID badge or through a secure login on a phone or tablet device. Once logged in, series of yes or no questions is populated on the app to determine any potential health risks. If the question and answer session is a success, the employee or student is asked to take their temperature using a Bluetooth forehead thermometer and their SpO₂ using a Bluetooth pulse oximeter to record real-time vital signs prior to entering the building. If any of the questions are “suspect” the employee or student is asked to remain at the door and wait for a staff member.

Webinar Objectives:

- Identify the ways that B2W improves employee screening of COVID-19.
- How B2W will mitigate exposure at work of asymptomatic employees and mitigate liability.
- Demonstration of the ease of implementation.
